

## Partners Moves Toward Sustainability

Partners Executive Transportation, based in New York City, recently announced that it has joined with Green Ride Global (GRG) to create and implement a comprehensive environmental sustainability program. The company commenced the first phase of the program—a baseline measurement of the greenhouse gas (GHG) emissions caused by its fleet and facilities—this past April. The company will also implement an emissions-reduction plan throughout the entire business operations.

In this era of increasing corporate and public environmental awareness, Partners Executive Transportation is committed to being the first in the New York area by leading the way in environmental responsibility in the chauffeured ground transporta-

tion industry, according to a press release issued by the company. Partners is also encouraging its 313 worldwide affiliates to join the program as well.
